## Aiche Lines For Hazard Evaluation Procedures

**sizing pressure-relief devices - aiche** - this article follows up with an introduction to sizing pressure-relief devices to ensure that they function properly. more detailed information on relief sizing is provided in **double block and bleed - aiche** - "double block and bleed" isolation system may be examples. for example, the vent on a double block and bleed used to stop material flow by a safety shutdown system most likely needs to be open when the plant is in operation. but, be careful - sometimes the bleed from a double block and bleed needs to be capped or plugged. **sustainability: managing the triple bottom lines** - s marc karell, p.e., cem climate change & environmental services aiche nyc metro section new york, ny july 13, 2015 **sustainability: managing the triple bottom lines guidelines for pressure relief and effluent handling systems** - addendum: guidelines for pressure relief and effluent handling systems aiche/ccps page 1 of 1 13 apr 02 lls page location correction (changes are in bold; recent ones are highlighted) 292 table 3b.4-3 for all options, see: "tphem - supplement for advanced users" (attached). **aiche national student design problem** - aiche headquarters 120 wall street, fl 23 new york, ny 10005-4020 ... continuous process lines are proposed in the report. the end product of each case discussed is a nylon 6,6 fiber, as the nylon chips created are further processed in order to increase the selling **lopa articles - process-improvement-institute** - of the american institute of chemical engineers. the use of this product in whole or in part for commercial use is prohibited without prior express written consent of the american institute of chemical engineers. to obtain appropriate license and permission for such use contact scott berger, 212-591-7237, scotb@aiche. **aiche student design competition - courses.engry** - the lines are in agreement with the pfd. assumptions in producing this model are as follows: • aspen plus polymers provided accurate reaction energy and material balances ... aiche student design competition sarah smith and hannah botts university of kentucky ... **ccps process safety beacon sponsored by - sache** - an aiche industry technology alliance sponsored by aiche following are some key safety considerations: check that adequate space is allocated when moving construction equipment onto a plant site. check clearances on overhead power lines, instrument conduits and pipe racks. **benchmarking sustainability - university of minnesota duluth** - monitoring of total company business lines. although the initial focus is on global chemical com-panies and the u.s. chemical manufacturing sector in ... starting in 2001, when the american institute of chemical engineers (aiche) decided to strike out on a new strategic direction, a number of new initiatives were begun. these new areas included ... **nitrogen: a security blanket for the chemical industry** - nitrogen: a security blanket for the chemical industry ... transfer lines, and railcars removes both oxygen and water vapor from these containers and prevents oxidation of the phospholipids, triglycerides, and free fatty acids — mak- ... nitrogen: a security blanket for the chemical industry ... **sponsored by ccps messages for manufacturing personnel** ... • condensate lines from steam traps can freeze causing the traps to be ineffective. • some process materials can freeze at winter temperatures, or solids may precipitate from process solutions, causing loss of flow and requiring maintenance operations to clear blocked pipes or equipment. **process safety beacon - 3-02a - sache** - • pluggage in vent lines must be managed - if a line has a tendency to plug, cleaning frequencies should be adjusted to maintain the line in a "clean" state; and • non-routine operations often have fewer or weaker layers of protection when compared with "routine" operations, all items preventing equipment damage are **flare system inspections for olefins facilities - zeeco, inc.** - aiche . flare system inspections for olefins facilities . james cleavinger ... this is important on the pilot gas, ignition lines, and the steam lines. in the steam piping, the heat-affected components of the flare tip can be prone to weld failure caused by a ... flare system inspections for olefins facilities author: james cleavinger, flint ... **process safety management for small businesses** - process safety management for small businesses 7 major process equipment and interconnecting process flow lines. pfd's may also show flow rates, stream composition, temperatures, pressures, heat exchanger duties, and the process heat and material balance. employers must also compile information on the process chemistry, establish **aiche journal - thammasat university** - journal: aiche journal manuscript id: aiche-11-13450 wiley - manuscript type: review article date submitted by the author: ... transmission lines or waveguides, which are used to couple energy of the microwave source to the applicators .12 microwave applicators are generally classified into single mode cavities and multi mode cavities. **2014-06-11-gef09-american institute of chemical engineers** ... - american institute of chemical engineers ... check here if you need more lines. provide the additional information on a separate piece of paper and return it with your enrollment form. ... microsoft word - 2014-06-11-gef09-american institute of chemical engineers (dental)c **aiche paper 098d a novel approach to the event prediction** ... - a novel approach to the event prediction and mitigation problem in an ethylene plant michael bell, p. eng. principal applications engineer prepared for presentation at the 2015 spring national meeting austin, tx, april 27-30, 2015 aiche and epc shall not be responsible for statements or opinions contained in papers or printed in its publications **seminar on the bhopal disaster: a case history - aiche** - 10,000 phone lines existed for a city of nearly 900,000 residents. four major hospitals existed with 1,800 beds and 300 doctors. electricity supply was sporadic. even with these shortcomings, the city offered more than most towns and cities in madhya pradesh. the indian and local governments had a strong desire to industrialize cities like bhopal. **using process flowsheets as communication tools** - are

---

useful communication tools because they are not as complex as p&ids, and it takes much less time to create a pfd; this is especially useful when a plant's design has not been finalized, and it would be too costly to draw and redraw a detailed p&id multiple times. in many sectors of p figure 2. **good management practices for shrimp farming in costa rica** - good management practices for shrimp farming in costa rica july 05, 2006 this project report is submitted in partial fulfillment of the degree requirements of worcester polytechnic institute. the views and opinions expressed herein are those of the ... figure 2-25 open page with shorter lines of text and spaces between lines (aiche, 1996) **laser mapping of coke drums - what has been learned? aiche ...** - aiche spring national meeting march 1998 new orleans, la ... the drum (between the tangent lines of the top and bottom drum sections). this range data is further processed by custom software to: • "roll out" the drum cylinder to a obtain flat surface representation **reprinted with permission from cep (chemical engineering ...** - be included in a pha review to follow process lines across multiple drawings and identify consequences on possibly several drawings is time consuming and complicated, and **lng tandem offloading system - sofec** - aiche shall not be responsible for statements or opinions contained in papers or printed ... inch product lines, from a fixed outboard boom. ... this system does not require hawser lines or stern thrust during the offloading operation. lng carriers can be purpose built with the **the role of mechanical integrity in chemical process safety** - these lines of defense are the primary lines of defense or means to prevent unwanted ... in the osha excerpt above include those published by organizations such as the american institute of chemical engineers, the chemical manufacturers association, the chlorine institute, the compressed gas association, and publications from various property ... **benefits of cfd in modeling solids suspension in stirred ...** - paper 174h. aiche 2000 annual meeting copyright 2000 fluent inc. all rights reserved. title: aiche2000-osh.pdf author: osh created date: 11/15/2000 6:05:25 pm **designing a process flowsheet - coade.typepad** - instrument lines instrument lines show both the flow of information between instruments and how that signal is passed from instrument to instrument. examples of different signal lines include equipment-to-instrument connection lines, electrical, hydraulic, pneumatic, capillary, etc. these use various solid **20131068 - the university of oklahoma** - expansion. long lines (i.e., more than about 300 ft) that are not in continuous service generally need protection from liquid thermal expansion, as do loading and transfer lines and other lines that extend beyond the battery limit (i.e., the property line). finally, lines with a history of overpressure, for example as indicated by gasket blowout, **use nitrogen safely - air products & chemicals** - use nitrogen safely p figure 1. gaseous nitrogen, vaporized from onsite liquid storage into a local distribution system, is used for a wide variety of applications, including blanketing, inerting, purging, stripping, and sparging. other supply modes ranging from cylinders to onsite generation are also used to deliver nitrogen gas. **tutorial: delayed coking fundamentals - inside mines** - refinery personnel with the delayed coking operation, delayed coking unit hardware, types of coke that can be produced, coke formation models, and the uses of petroleum coke. also, by discussing some of the delayed coking process problems encountered in the industry, we hope to encourage new advances, solutions, and improvements for the future. **hydrogen safety in the sulfuric acid industry - dupont usa** - hydrogen safety in the sulfuric acid industry by: james w. dougherty, process engineer, mosaic fertilizer llc feature acid cooler tube failures converter division plate damage viewed from below acid plant equipment failures resulting hydrogen explosion equipment damage waste heat boiler tube failure converter shell damage - 4 ... **learning and soft skills development in chemical ...** - advantage since today's chemical engineers are no longer confined to the traditional lines of work in the discipline. while aiche nsdc problems seem ideal for training cheps students, past problem statements were not readily available until recently when aiche started posting them on the internet (aiche, n.d.). **influence of epigenetics on bioprocessing** - ten cell lines that expressed different proteins found that while promoter methylation was a factor in productivity loss, gene copy number loss was more common (3) . **particle-in-cell simulation of electron and ion energy ...** - particle-in-cell simulation of electron and ion energy distributions in dc/rf hybrid capacitively-coupled plasmas paola diomede ... vc 2013 american institute of chemical engineers 3214 september 2013 vol. 59, no. 9 aiche journal ... (dashed lines) density profiles for the base case condition. ... **author: compressor selection rev 02- viska ... - aiche** - klm technology group rev: 02 practical engineering guidelines for processing plant solutions section : compressor selection and sizing (engineering design guideline) **an overview of inherently safer design - winter 2018** - an overview of inherently safer design! dennis c. hendershot staff consultant, center for chemical process safety dennis.hendershot@gmail metro new york section, american institute of chemical engineers april 19, 2010 new york, ny. 2 ... drawn "process mimic" lines similar displays in functional groups **back to basics - tlvs** - ages, or even water hammer in its steam supply lines, which has the potential to cause severe damage to equipment and piping and unscheduled plant shutdown. even so, many sites do not have a regular steam trap maintenance program in place. however, the investment needed to maintain a high-quality steam system through **a systematic approach for - aiche engage** - inform overall project progress and dead lines. key milestone events of the project. level 2 schedule : helps to the planning of phases, stages and elements which are critical with regard to cost , technical requirements and time frames as follows (developed at the beginning of basic engineering phase ) understand the key milestones and interfaces. **lines of defence/layers of protection analysis in the ...** - lines of defence/layers of protection analysis in the comah context prepared

---

---

by amey vectra limited for the health and safety executive . ii lines of defence/layers of protection analysis in the comah context andrew franks ... (lopa) technique is described in detail in the american institute of chemical engineers center for chemical process ... **design of fuel additives using neural networks and ...** - design of fuel additives using neural networks and evolutionary algorithms anantha sundaram, prasenjeet ghosh, james m. caruthers, and venkat venkatasubramanian ... no. 6 aiche journal. figure 3. hybrid neural network for ivd prediction. ... tecture is outlined along the lines of the general forward model framework in figure 3. the development ... **on the design of crystallization-based separation ...** - aiche journal may 2006 vol. 52, no. 5 published on behalf of the aiche doi 10.1002/aic.1755 requires adjustment based on mass balances in the system, and is represented by dotted lines. **visualizing the mccabe-thiele diagram** - operating lines and the q-lines even though all three are straight lines. for the purpose of calculating equilibrium compositions, x-y data have been entered as a table with 101 points (x\_data, y\_data). this spacing of data points is expected to be adequate for accurate interpolation of the acetone-ethanol x-y diagram. for another system with **leveraging smart valve positioners - emerson** - between the green line and red or blue lines can be used to calculate valve friction. valve signatures should be recorded when the valve is brand new so that future valve signatures can be overlaid to check for changes pfigure 3. a step-response test checks the response of the entire valve assembly and **effect of pressure on the complete phase behavior of ...** - 0.95, the solid-liquid lines have a shape characteristic of a solid solution (with or without a minimum melting temperature); as the diameter ratio decreases, the solid-liquid lines fall to lower temperatures until they eventually drop below the solid-solid coexistence region, resulting in either a eutectic or peritectic **estimation of flows and temperatures in process networks** - page 642 september, 1977 aiche journal (vol. 23, no. 5) scope in the course of daily operation of a petroleum refinery or chemical complex, many thousands of items of information are generated, gathered, and recorded. these data are, in turn, used to plan, schedule, control, and evaluate process operations. **recent progress in high temperature electrolysis** - herring aiche 2007 11-7-07 24 conclusions • conventional electrolysis is available today • high temperature electrolysis is under development and will be more efficient • hte experimental results from 25-cell stack and 2x60-cell half-module, fabricated by ceramtec, - hydrogen production rates in excess of 160 normal liters/hour were maintained with a 25-cell solid-oxide electrolysis ... **producing hot water by direct steam injection** - by radiation from condensate return lines. at the receiver tank, more energy is lost when the condensate flashes as it is reduced to atmospheric pressure. overall efficiency falls, too, as mineral deposits accumulate on the wetted side of the metal conductor and create an insulating barrier. with direct steam injection, 100% of the steam con- **understand pilot-plant design specifications - zeton** - lines. in figure 3a, the pilot-plant piping needs to be expanded to accommodate the bulky thermowell. the time to achieve equilibrium following a temperature change will be significantly delayed at the pilot-plant scale because the 1. 1.5-in. pipe 2. 1.5-in. class 300 flange 3. 2-in. pipe 4. 2-in. class 300 flange 5. 2-in. class 300 ball valve 6. **paper4d pressure drop measurements on distillation column** - the aiche shall not be responsible for statements or opinions contained in its publications . 2 ... pressure drop measurements also play an important role in the troubleshooting ... lines/tubings connecting to pressure transducers, locations of the tap and transducers, and calibrations etc. various factors can ... **spreadsheet techniques and problem solving for ches** - aiche webinar presentation spreadsheet techniques and problem solving for ches david e. clough professor dept. of chemical & biological engineering university of colorado ... use straight lines only for analytical functions or hundreds of data scatter plots are the best choice for **cubic-plus-association equation of state for water ...** - vvc 2009 american institute of chemical engineers aiche j, 55: 1803-1813, 2009 keywords: petroleum, phase equilibrium, aqueous solutions introduction the importance of water-containing mixtures is widely recognized in many disciplines particularly in the fields of energy and environment. however, it has been challenging
